

Dataset: ESS5-2010, ed.3.0

**Regression analysis:**

**Dependent variable:**

Trust in the United Nations

**Independent variable:**

TV watching, total time on average weekday

	B	SE B	Beta	T	Significance	Tolerance
TV watching, total time on average weekday	-0.05	0.01	-0.04	-7.96	0.0000	1.00
Intercept	5.08					
Valid N	46,113.37					
Multiple R	0.037					
Multiple R Squared	0.001					
Adjusted R Squared	0.001					
F value	63.42					
F sign	0.0000					

Weight: Design weight

**Note** In general, you must weight tables before quoting percentages from them. To apply weights, select the Weight icon and choose one or more weight variables to use. The Design weight (DWEIGHT) should always be applied. The Population size weight (PWEIGHT) should additionally be applied if you are looking at aggregates or averages for two or more countries combined. Users should note that the two weights currently available do not adjust for non-response in the sample. See the guide [Weighting European Social Survey Data](#) for fuller details about which weights to use.

Users of data are obliged to read the [ESS Conditions of use](#)
